# IMX MULTIPROTOCOL

IMXRT1020 MCU Embedded contest 2021

ONE BOARD TO RULE THEM ALL

Project name : IMX - MULTIPROTOCOL
Maker : Stulin Enrico – enrico.stulin@gmail.com
Necessary Hardware: Just NIMXRT1020-EVK + 1xMicro USB cable
Complexity: Very simple

Introduction:

The IMX Multiprotocol for NIMXRT1020-EVK is an embedded software solutions that allows you to transfer data from USB to all the main digital interfaces - UART, I2C and SPI.This project will help you to analyze and debug all the main digital and analog IC's as well as lot of IOT and RF demoboard, saving you the time to develop a custom firmware, or buying expensive data converters.
